

WHITEPAPER

The support coin for second-generation traders

Crypto gets messy. Bring TI\$\$UE. TI\$\$UE aims to be the support coin for second-generation traders: a community built around shared knowledge, creative participation, and useful digital experiences. **Wipe your ass in profits.**

Official website: tissuedefi.com

Draft for project review. Token deployment, audits, utility delivery, and exchange availability are not verified by this document.

01 / Vision & scope

The Meme. The Movement. A community with a purpose.

Crypto gets messy. Bring TI\$\$UE. Born from meme culture, TI\$\$UE aims to be the support coin for second-generation traders: people who value smarter tools, shared knowledge, and a community that stays connected through volatile markets. The planned Solana token has a total supply of 10,000,000,000.

The project thesis

The gold is our style. The humor is our language. Supporting second-generation traders is our mission. Here, second-generation traders means a community that combines market curiosity with digital tools, responsible learning, and collaboration. TI\$\$UE proposes a place to learn, create, exchange ideas, and participate; it is not an established trading service.

Three priorities

Community: build participation through creative campaigns, transparent announcements, and defined reward programs.

Utility: test educational experiences, community rewards, and practical token uses before expanding.

Transparency: publish token addresses, authority settings, treasury information, and launch evidence before describing them as complete.

What this whitepaper establishes

This draft records the project's intended supply, allocation, presale fundraising target, and proposed execution plan. It does not establish that a token has been deployed, that a sale is open, or that a third party has approved the project.

Parameter	Project specification
Network	Solana — planned
Token name / branding	Tissue Token / TI\$\$UE
Total supply	10,000,000,000 tokens — planned
Presale allocation / target	2,500,000,000 tokens / \$150,000 gross
Sale structure	Six rounds — proposed schedule on page 4

02 / Tokenomics

A complete allocation of the planned 10-billion-token supply

Allocation	Tokens	Share
Presale	2,500,000,000	25%
Liquidity and market making	3,000,000,000	30%
Community rewards and airdrops	1,500,000,000	15%
Ecosystem and partnerships	1,000,000,000	10%
Marketing	750,000,000	7.5%
Team — vested	750,000,000	7.5%
Treasury reserve	500,000,000	5%
TOTAL	10,000,000,000	100%

Allocation principles

Presale tokens fund the initial project. Liquidity tokens support planned market access; their allocation does not establish liquidity depth or guarantee tradability. Community and ecosystem budgets support defined programs. Marketing supports distribution and content. The treasury preserves operating flexibility.

Vesting proposal: apply a one-month cliff followed by 12 months of linear vesting to the team allocation. The vesting start event, custody arrangement, and enforceable release mechanism must be published before distribution. This is a proposed policy, not an existing on-chain lock.

Public allocation wallets and reconciliations should distinguish total supply, unlocked supply, circulating supply, distributed tokens, and remaining balances.

03 / Six-round presale

Proposed pricing schedule — exactly \$150,000 at full subscription

The project intends to offer 25% of supply across six increasing-price rounds. The schedule below is a new proposal for approval; it is not a statement of current sale terms. Prices are denominated in USD per token.

Round	Tokens	Price (USD)	Gross raise
1	500,000,000	\$0.000030	\$15,000
2	500,000,000	\$0.000040	\$20,000
3	500,000,000	\$0.000050	\$25,000
4	500,000,000	\$0.000060	\$30,000
5	250,000,000	\$0.000100	\$25,000
6	250,000,000	\$0.000140	\$35,000
TOTAL	2,500,000,000	Weighted: \$0.000060	\$150,000

Rounds 5 and 6 each offer a smaller allocation at higher proposed prices. Gross proceeds assume every offered token is sold. Processing fees, operating costs, refunds, and any applicable obligations reduce funds available to the project.

Purchase and delivery policy

The intended experience supports Solana-wallet purchases and a card-payment option if a suitable provider is approved. Wallet connection is not a token purchase. Each transaction should display the quote, fees, destination wallet, and delivery status.

Immediate token delivery is the preferred goal after confirmed payment and a successful token transfer. It must not be promised before the mint, funded inventory, payment confirmation rules, and delivery system are verified. Publish procedures for failed transfers, duplicate payments, card reversals, sale cancellation, unsold tokens, and refunds before accepting funds.

04 / Utility roadmap

Proposed uses to validate before scaling

Support for second-generation traders

The proposed community will share educational resources, creator-led discussions, and peer experiences. Participation should help people ask better questions and understand tools and risks. No signal service, automated trading integration, or professional advice is represented as available.

Community rewards

Use the community allocation for published campaigns: creative competitions, verified contributions, educational participation, and ecosystem activity. Rewards should follow defined eligibility, anti-abuse checks, budgets, and distribution records.

Digital collectibles & access

Explore branded collectibles, NFT campaigns, and token-gated community experiences. Publish what holders receive, how access is measured, and whether a separate purchase is required. Holding TI\$\$UE should not be represented as ownership of brand IP.

Merchant and creator pilots

Test token payments or discounts with participating merchants and creators after integrations are available. Early pilots should demonstrate actual redemption and repeat use before broad payment claims are made.

Proposed product concepts

Tissue Wallet: a future wallet-oriented experience for holdings, rewards, and purchase visibility.

Tissue Closet: a future branded commerce and collectible experience.

These names describe concepts; no production release or external integration is established here.

Wipe your ass in profits.

Our cheeky rallying cry celebrates the brand's humor. It does not promise profits or protection from losses. Luxury artwork does not imply returns or endorsements.

05 / Operations & safeguards

Publish verifiable launch evidence before requesting trust

Token design decisions

Finalize the mint address, token program, decimals, supply controls, freeze authority, metadata authority, and wallet compatibility. Publish the implemented configuration and explain who can change it. The supply policy should prevent undisclosed inflation beyond the planned 10 billion tokens.

Transaction fee — unresolved

The project has considered a 0.5% or 1% fee. Neither rate is adopted by this draft. Any fee requires a final technical design, disclosed recipients, scope, caps, exemptions, modification authority, and compatibility tests. A fee should not be described as collected on every transaction unless the implementation actually supports that claim.

Treasury and reporting

Proposed controls include separate allocation wallets, multiple approvers for material treasury spending, documented budgets, and periodic balance reports. Publish the actual approvers, wallet addresses, and approval threshold after setup. Do not describe proposed controls as deployed safeguards.

Liquidity and market access

Raydium is the intended initial liquidity venue, subject to implementation and compatibility review. There is no confirmed listing, endorsement, or launch price in this document. Token allocation for liquidity must be paired with a funded quote asset; 30% of token supply alone does not establish dollar liquidity.

Before launch, publish pool details, paired assets, amounts deposited, liquidity-control arrangements, and any lock proof with its duration and conditions. Publish independent review findings and unresolved issues; an audit is not currently established by this draft.

06 / Funding & milestones

Proposed budget and delivery gates — not calendar promises

The following planning budget assumes the full \$150,000 gross target. Final amounts must be adjusted for fees and disclosed costs. No spending allocation is represented as already committed.

Proposed use	Share	At \$150,000
Liquidity quote-asset funding	50%	\$75,000
Product and delivery engineering	20%	\$30,000
Security review and testing	10%	\$15,000
Community and marketing	10%	\$15,000
Operations and contingency	10%	\$15,000
TOTAL	100%	\$150,000

Milestone gates

- 1 — **Define:** finalize mint configuration, fee decision, custody controls, purchase terms, and presale schedule.
- 2 — **Build:** implement token delivery, wallet flows, payment handling, dashboards, and failure recovery.
- 3 — **Verify:** complete relevant security reviews, publish addresses and authorities, test delivery, and confirm launch readiness.
- 4 — **Launch:** conduct the approved sale, report allocations and proceeds, and establish disclosed liquidity arrangements.
- 5 — **Prove utility:** run measurable rewards, collectible, or merchant pilots; expand based on observed use.

Suggested measures: unique active participants, successful deliveries, repeat utility users, redemption counts, treasury runway, support resolution time, and publicly reconciled allocation balances.

07 / Transparency & risk

A credible movement needs clear boundaries and visible evidence

TI\$\$UE is a speculative project. Token value can decline substantially or reach zero. Liquidity may be limited, and token ownership does not guarantee income, profit, dividends, redemption, or completion of proposed products. This draft grants no equity or treasury rights.

Material risks include software vulnerabilities, compromised keys, transaction errors, payment reversals, market volatility, low adoption, treasury shortfalls, regulatory restrictions, and third-party service failures. Roadmap items may change or be delayed.

Required publication checklist

Before a public sale, publish the responsible entity and team information; token mint and authority configuration; purchase eligibility and terms; final pricing and fee policy; delivery and refund rules; allocation wallets and vesting evidence; security-review status; and the planned liquidity policy. Obtain qualified review of the sale structure and payment operations.

Document status

Version 1.1 • October 6, 2026. Prepared from project specifications and supplied brand artwork. “Wipe your ass in profits” is a humorous brand tagline, not a promise of returns. “Support coin” describes the community mission; it does not imply price support, a reserve backing, loss protection, or guaranteed trading outcomes. Current token deployment, contract functionality, card acceptance, audits, locks, treasury custody, and live utility have not been independently verified. Proposed pricing, funding splits, product concepts, and operational controls require project approval.

THE MEME. THE MOVEMENT.
